

Higher power density, low fuel consumption

The F36 engine from FPT Industrial leverages a renewed architecture (new cylinder head and block) and state-of-the-art technological content (new injectors and wastegate turbocharger) to deliver outstanding performance. To meet emissions requirements, the F36 features the HI-eSCR 2 system, a maintenance-free system marking another step in our long-term SCR development. The F36 optimizes customers' total cost of ownership through best-in-class service intervals, single-side maintenance, hydraulic tappets and a compact footprint.
